Election/Restriction

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-29, drawn to process for preparing recombinant adenovirus, classified in class 435, subclass 239.
- II. Claims 30-43, drawn to adenovirus composition, classified in class 435, subclass 235.1.

The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case, a product having the same characteristics and utility as the claimed product can be made by a materially different process, such as by production of large numbers of adenovirus particles by scaleup of conventional methods, or by production of adenovirus particles by infection of early log phase host cells.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification and divergent search requirements, restriction for examination purposes as indicated is proper.

Art Unit: 1648

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
